

Granny Storm Crow's List - January 2018

Well, we are still waiting for Trump to make good on his words- *"Marijuana is such a big thing. I think medical should happen — right? Don't we agree? I think so. And then I really believe we should leave it up to the states."** Was that just another meaningless “campaign promise”?

When will our federal government bow to reality and the will of the people, and de-schedule cannabis? An effective herbal medicine that is safer to use than common aspirin has no business being a Schedule I drug! And we all know cannabis is a far safer intoxicant to use than alcohol.

Just why are medicines that can cause “suicidal thoughts or actions” perfectly fine to prescribe, while a simple herb that lifts your mood is strictly forbidden by federal law? Why are synthetic forms of THC (Marinol, Syndros, and Cesamet) considered as legitimate medicines that can be prescribed, yet THC, when extracted from a plant, is Schedule I – having no medical uses?

Our government’s Compassionate Investigational New Drug Program has been in existence since the mid-1970s. Every single month, the aging patients in the program have received 300 pre-rolled, government-issued “marijuana cigarettes” to be used for medical purposes. If cannabis has no medical uses, why has our government continued to provide medical marijuana for those patients for decades?

Over at PubMed (a .gov site), studies detailing the varied medical uses of cannabis and the cannabinoids are being published at an increasingly rapid rate. Yet our government stubbornly clings to its out-dated claims that cannabis has NO medical uses.

This List of studies and news articles is my protest to our government’s prohibition of all forms of cannabis. It is my hope that you will share my List and its information with others. Once the facts about cannabis become known, the need for full federal legalization becomes obvious!

In 1938, hemp was called “The Billion Dollar Crop”**. To put that into perspective, in 1938 you could get a brand new luxury car, a Chrysler Royal Brougham, for all of \$975. So how much do you think the industrial hemp market would be worth today? And that amount is bolstered by the many new and remarkable uses for hemp that have been created during the last 80 years.

The government’s deliberate ignorance and outright lies about this useful, healing plant must end! For 80 years, our government has waged a futile and expensive war not only against this plant, but against its own people. The cruel fiction of “Schedule I” must give way to the facts - cannabis IS medicine and hemp is a multi-billion dollar crop just waiting to happen. And as my late grandfather once said, **“If the truth won’t do, then something is wrong!”**

Granny Storm Crow

OMEGA-3/ CB1 CONNECTION - α -Linolenic acid (ALA)- plant form, Eicosapentaenoic acid (EPA)- animal form, Docosahexaenoic acid (DHA) animal form. - without Omega 3, new CB1 receptors are made imperfectly. Scientists recommend between a “1 to 1” to a “4 parts Omega 6 to 1 part Omega 3” ratio for the best health. Our modern diet can give us up to 50 parts Omega 6 to 1 part Omega 3. Also see NUTRITION – HEMP SEED OIL, CBR- CB1 RECEPTORS.

OMEGA-3/ CB1 CONNECTION +* α -Linolenic acid (ALA)- plant form, Eicosapentaenoic acid (EPA)- animal form, Docosahexaenoic acid (DHA) animal forms. - without Omega 3, new CB1 receptors are made imperfectly. Scientists recommend between a “1 to 1” to a “4 parts Omega 6 to 1 part Omega 3” ratio for the best health. Our modern diet can give us up to 50 parts Omega 6 to 1 part Omega 3. Also see NUTRITION – HEMP SEED OIL, CBR- CB1 RECEPTORS.

Marijuana may help delay Alzheimer's symptoms

(news – 2016)

<http://psychcentral.com/lib/marijuana-may-help-delay-alzheimers-symptoms/>

Granny Storm Crow's List - July 2014

MINI-DICTIONARY- Sci-Speak to English

Just a few definitions to help you along.
(You might want to print this up.)

A

Acetylcholine – a common neurotransmitter

Achalasia - a disease of the esophagus, a failure of smooth muscle fibers to relax

Acute- sharp or severe in effect; intense

Adenosine- a compound that makes you tired

Adipose tissue - fat

Adipocyte – a fat cell

Adjunct – a medication used in conjunction with another to help it work better

Adjuvant - a substance that acts to prolong, or enhance antigen-specific immune response.

2-AG - A “messenger chemical” made by your body – similar to THC

Afferent - conveying impulses toward the central nervous system/ brain

Agonist – a chemical that activates a receptor

Allodynia- pain due to a stimulus which does not normally cause pain, (ie- a light touch)

Allosteric- works through a “back door” mechanism, not the usual binding site

Amygdala – an area of the brain that plays a key role in the processing of emotions

Analgesic – pain relieving

Analogue – a synthetic version

Anandamide/ AEA - a “messenger chemical” made by your body – similar to THC

Anaplasia – normal cells de-evolving and degrading into cancer cells

Anapyrexia - body temp dropping below normal

Angiogenesis - making new blood vessels, often to feed a tumor

Anorectic - Pertaining to anorexia, a lack of appetite

Antagonist – a chemical that blocks the action of an agonist

Antigen - a substance which causes an immune response

Anti-nociception - pain relieving

Anxiolytic – calming, anti-anxiety

Apoptosis - a process that leads to the normally programmed death of a cell.

Aqueous humor – the liquid between the colored iris and the clear cornea of your eye

Arachidonic acid - an Omega 6

Astrocytes – Glial cells that link the vascular system to its neighboring neurons

Ataxia - lack of muscle coordination during movements like walking, or picking up objects

Atherogenesis – the formation of arterial plaques, as in atherosclerosis

Autapse - a synapse formed by the axon of a neuron on its own dendrites

Autocatalysis – when a single chemical reaction happens

Autocrine – when a cell secretes a compound that binds to receptors on the same type of cell.

Autopathic - relating to the structure and characteristics of a diseased organism. Idiopathic.

Autophagy – the cell self-destructs, literally “eats itself”

B

Baroreflex – the way your body uses your heart rate to control blood pressure

Beta amyloid plaque / β -amyloid/ $A\beta$ – the stuff that gums up your brain in Alzheimer’s

Biphasic – different results for different doses, THC stops or causes nausea depending on dose

Bronchodilator – opens up the lungs

C

Cachexia – severe wasting away due to illness

Cannabinoids – they activate CB receptors and are made in your body, cannabis or labs.

Cannabinomimetic – acts like a cannabinoid

Capacitation- chemical changes in a sperm that let it fertilize an egg.

Carcinoma - cancer

Caveolae - little caves or pits in the cell membrane that trap fluids

CCK – an intestinal hormone that tells you that you are full and satisfied

Cell oncosis – the cells fill with water and calcium, their proteins denature, and they die.

Central nervous system/CNS - the brain and spinal cord

Chemotaxis - the movement of a cell or bacteria toward, or from a stimulus (food or a poison)

Cholestasis - a condition where bile cannot flow from the liver to the duodenum

Cholinergics- drugs that inhibit, enhance, or mimic the action of acetylcholine

Chondrocytes- the only kind of cells found in healthy cartilage

Chronic – long term

Cirrhosis – scarring (usually) of the liver, impairing function

Clastrum - a thin, irregular, sheet of neurons attached to the bottom of the brain's neocortex

Cogeners- related chemicals

Colocalize- to occur together in the same cell.

Corticolimbic circuits- brain circuits that control cognitive and emotional behavioral processes.

COX-2 - a key enzyme that oxidizes Anandamide

Cross tolerance – tolerance to a drug causes tolerance to another, similar, drug

Cryofixed - frozen with liquid nitrogen for electron microscopic examination

Cutaneous – pertaining to the skin

Cypin - A protein that regulates neuron branching

Cytotoxic – poisonous to living cells

D

Demyelinating diseases - diseases in which the myelin on nerves is destroyed, as in MS

Dimer - a molecule composed of two identical, simpler molecules.

Docosahexaenoic Acid (DHA) - an Omega 3

Dopamine - a neurotransmitter that helps control the brain's reward and pleasure centers

Dose-dependent manner – the more they got, the more effectively it worked

Downregulation – a decrease in number

Dysautonomic Syndrome - an umbrella term used to describe (POTS), multiple system atrophy, autonomic failure, and autonomic neuropathy.

Dysgeusia - a distortion of the sense of taste

Dysregulation – malfunctioning, out of kilter

E

Efferocytosis- the removal of dead or dying cells

Eicosanoids – a group of bioactive compounds that include the endocannabinoids

Eicosapentaenoic Acid (EPA) – an Omega 3

Emesis- vomiting

Endocannabinoid – a chemical messenger made by your body- anandamide and 2-AG

Endocannabinoid System/ ECS – a system of chemical receptors on and between your cells

Endogenous – made in your own body, opposite of exogeneous

Epidermal – pertaining to the skin

Epigenetic- genes being turned on, or off, by chemical reactions, but with no change to the DNA

Epithelial cells –cells lining of your gut and surfaces of structures throughout the body

Excitotoxic- when nerve cells are damaged or killed by over-stimulation

Exogenous - from outside the body, opposite of endogenous

Extracellular – outside of the cells

F

FAAH/ Fatty acid amide hydrolase – an enzyme that breaks down anandamide

Fascia - connective tissues

Follicle - sac or cavity having excretory, secretory, or protective function: a hair follicle,

G

GABA Glycine- it keeps nerves from firing too often

Ganglia/ ganglion – a bunch of nerves outside the CNS, or some gray matter bits in the brain

Gene expression- the body reads a gene's info and translates it into a product (protein, etc)

Gene isoforms – different kinds of mRNAs that are produced from the same site.

Genotype - all the genetic traits of an organism, both visible and hidden

Glial cells – they form myelin, and provide support and protection for neurons

Glomerulus - a kidney cell involved in the first stages of filtering blood

Glutamate- a compound that many nerves use to “talk to each other”

Gut microbiota - microorganisms that live in the digestive tract

H

Haploid – having half the number of chromosomes of a normal cell, as in sperm and eggs.

Hebbian theory - a neuroscience theory about the adaptation of brain neurons during learning.

Hemp – Cannabis sativa, usually referring to strains with a low level of THC

Hemoptysis – coughing up blood

Hematopoiesis – the making of new blood cells in bone marrow

Haematopoietic Stem Cells/ HSC - bone marrow stem cells that can give rise to blood cells

Hemopressin - a hemoglobin fragment that dilates blood vessels using nitric oxide

Hemostasis- the process of blood clotting

Hepatic – pertaining to the liver

Heterologous - from one species to another

Heteromer – a group containing 2 or more different types of things.

Hippocampus – part of the brain, controls mood and memory.

Homologous - having the same or a similar relation, as in relative position or structure

Homeostasis - your body keeping everything in balance and working right

Hydrolysis - breaking down a compound using enzymes

Hyper- over, above, extreme

Hyperalgesia – severe pain

Hypercapnia - too much CO₂ in the blood

Hyperemesis – severe vomiting

Hyperemic - an abnormally large amount of blood accumulating in any part of the body.

Hyperphagic – over-eating

Hyperthermia – a fever

Hyperplasia- an increase in the number of normal cells in a tissue or an organ

Hypo- under, or below

Hypocretin (aka orexin)- a neuropeptide that regulates arousal, wakefulness, and appetite

Hypokinesia - A condition characterized by decreased bodily movement.

Hypophagic – under-eating

Hypothermia – lowered body temperature

Hypoxaemia - low oxygen levels in blood

Hypoxia – not getting enough oxygen

.

I

Ictal - refers to a physiologic state or event such as a seizure, stroke, or headache.

Ictus - an epileptic seizure, or alternatively, a stroke

Idiopathic- of unknown cause

Incretins - [metabolic hormones](#) that stimulate a decrease in blood glucose. Incretins are released after eating.

Indica - short plants, broad leaves, solid buds; “heavy” body high, good pain relief, some CBD

Inflammasome - immune system receptors and sensors that regulate inflammation

In silico – done on a computer

In vivo – in a live animal

In vitro – in a test tube

Infarction – damage from a lack of blood due to a blood vessel blockage

Intraocular – inside the eye

Intrathecal injection - injected under the arachnoid membrane of the brain or spinal cord

Intrauterine – inside the uterus

Inverse agonist- binds to a receptor like an agonist, but causes the opposite effect

Involution -the shrinking or return of an organ to a former size, as in a post-pregnancy uterus

Ischemia – damage from lack of blood to an area

J

Jejunum - the middle section of the small intestine in most higher animals

K

Koro- a fear that one's genitals are retracting and will disappear, “genital retraction syndrome”

L

Lactating - producing breast milk, nursing

Leptin – a hormone that turns on hunger

leukocytospermia – too many white blood cells in the semen causing serious fertility problems.

Leukotrienes - compounds that promote asthma and allergic reactions

Ligand - a chemical that binds to a receptor- THC is a ligand of CB1 and CB2 receptors

Linoleic acid (LA) - is a polyunsaturated omega-6 fatty **acid**

Lipids – fats and oils

Lysis - the destruction or decomposition of a cell

M

Macrophages - specialized cells that attack foreign substances, disease germs and cancer cells

MAGL - an enzyme that breaks down 2-AG

MAPK-JNK signal pathway- the way the receptor's message gets into the nucleus' DNA

Meiosis - cell division that results in a sex cell (sperm or egg).

Messenger RNA (mRNA) - a group of RNA molecules that take genetic information from DNA to the ribosome.

Metabolites – what's left over after your body breaks down a compound

Metastasis – spreading through the body

Microglial cells – they destroy germs and remove dying cells, but can “go crazy”, doing damage

Microphage - a white blood cell capable of ingesting bacteria, etc.

MicroRNA - short, single-stranded RNA molecules that regulate gene expression

Micturation – urination, peeing

Mitosis - one cell divides into 2 identical “carbon copies” of itself.

Modulate – control or regulate something

Monocytes- big white blood cells that can change into macrophages or dendritic cells.

Murine - mouse

Mydriasis - a disorder in which the pupil of the eye dilates abnormally, and stays dilated

Myelin – a protective covering on the axon part of a nerve cell

Myocardial – pertaining to the heart muscle

Myopericarditis - Inflammation of the heart wall and the sac around it, the pericardium

N

Nanomolar – a very tiny amount

Necrotic – dead or dying

Nephritis – an inflammation of the kidneys

Nephro – referring to the kidneys

Neurogenesis – new brain cells are being formed

Neurological soft signs/ (NSS) - Minor problems in coordination, complex motor tasks, and integrative functions

Neuroma - a growth or tumor of nerve tissue. Neuromas tend to be benign (non-cancerous).

Neuropathic Pain – pain due to nerve injury

Neuropeptide – compounds used by neurons to “talk” with each other

Neurophatogenic - causing disease of nervous system

Neuroprotective – protects nerves and brain cells

Neurotransmitter - a chemical messenger that carries messages between neurons and other cells

Neutrophil – the most common type of white blood cell

Nocebo- a harmless substance that creates harmful effects in a patient. Opposite of placebo.

Nociceptive –experiencing pain from a stimulus such as heat or tissue damage

Nociceptor – pain nerve

Non-canonical - not conforming to the general rule

Nonpsychoactive – won't get you high

Nonpsychotropic – won't get you high

Nootropic drug - a mind enhancing drug

Nucleus Accumbens – part of the brain involved in reward/addiction

O

Obtundation- less than fully alert, an altered level of consciousness

Occluded – blocked up, as in an occluded artery

Ocular – referring to the eye

Olfactory – pertaining to smell, odor detection

Oligodendrocytes - cells that make the myelin sheath that protects CNS nerves

Oocyte – a female germ cell/ egg

Orexin (aka hypocretin)- a neuropeptide that regulates arousal, wakefulness, and appetite

Oromucosal – pertaining to the lining inside of the mouth

Ortholog- the same gene in different species doing the same job, traceable to a common ancestor

Osteoblast – a cell that makes new bone

Osteoclast - cell that eats away and breaks down bone causing bone resorption

Oviduct - a tube that connects the ovary to the uterus

P

Placentation - the process of forming a placenta

Palliative - health care focused on relieving and preventing suffering

Partial agonist- doesn't activate receptor fully, may "hog" receptors, blocking full agonists

Pathogenesis - the origin and development of a disease

Peptide – string a bunch of peptides together, and you get a protein

Periaqueductal gray – the brain's the primary control center for reducing pain

Peripheral nervous system (PNS) - the nerves and ganglia outside of the brain and spinal cord

Peritoneal – pertaining to the peritoneum that lines the walls of the abdominal cavity

Phagocyte - a "clean-up crew" cell that "eats" harmful foreign particles, bacteria, and dead cells

Phagocytosis - When a phagocyte "eats" a bacteria or other object by engulfing it

Phenotype- the genetic traits that you can see

Phytocannabinoid – a cannabinoid produced by a plant – THC and CBD are examples

Phyto - referring to plants

Phytochemical – a compound produced by a plant

Pleiotropic- producing many effects, especially when referring to genes

Podocyte – a kidney cell that filters blood

Polymorphism – having more than one form, different phenotypes in genes

Porcine – pertaining to pigs

Prions – they cause Mad Cow Disease

Prostacyclins - prostanoids that are active in the resolution phase of inflammation.

Prostanoids- a group of eicosanoids consisting of the prostaglandins, the thromboxanes, and the prostacyclins.

Prostaglandins - prostanoids that mediate inflammatory and anaphylactic reactions

Proteolysis - the breakdown of proteins into smaller polypeptides or amino acids

Proteotoxicity - toxicity caused by proteins, usually by misfolded proteins

Pruritus – chronic itchiness

Psychoactive – will get you high

Psychotropic – will get you high

Pterygium /Surfer's Eye -a growth on the eye that can occur in people who are in the sun a lot

Pulmonary –pertaining to the lungs

Q

R

Receptors - These receive the chemical messages and send them into our cells.

Redox - (reduction–oxidation reaction) is a chemical reaction where oxidation states of atoms are changed. If an electron is stripped away is said to have been “oxidized”. If an electron is added is said to have been “reduced”.

Refractory - non-reversible

Refractory pain- pain not responding to the usual treatments, stubborn pain

Renal - pertaining to the kidneys

Reperfusion damage- damage caused when blood returns to an area

Reuptake - reabsorption of a substance by the cells that originally produced it

Rhabdomyolysis - the rapid destruction of skeletal muscle.

RNA - ribonucleic acid, a long, single-stranded chain of cells that processes protein

ROS/ Reactive Oxygen Species- production of this can cause a cancer cell to self-destruct.

Ruderalis – small, short-season, autoflowering strains, potency varies

S

Sativa – tall plant, long skinny leaves, slow maturing; a mental/ party high, occasional paranoia

Sclerosis - a stiffening of an organ with connective tissue

Sebaceous glands- oil glands in the skin

Seronegative - testing negative for a disease

Seropositive - testing positive for a disease

SiRNA- used to inactivate or “silence” a gene to validate the gene’s function

Spermatogenesis – the process of making sperm

Substance P- it sends pain info through the spinal cord

Synapse - a structure that lets a neuron pass an electrical or chemical signal to another neuron

Systemic mastocytosis - a systemic mast cell disease (SMCD) resulting the building up of too many mast cells

T

Teratologic – causing birth defects

Terpinoids – gives cannabis its odor, may help cannabinoids to enter cells more easily

Thiophilic - having an affinity with ligands that contain sulphur

Thrombocytopenia – a loss of platelets in the blood

Thromboxanes - prostanoids that mediate the vasoconstriction reaction

Transgenic – genetically modified, a GMO

Trichome – in cannabis, it usually refers to tiny mushroom-shaped structures that hold THC

Trigeminal nerve – responsible for sensation in the face, and biting and chewing

U

Ubiquitination: The "kiss of death" for proteins. The protein is inactivated by ubiquitin.

Ubiquitin – a regulatory protein that inactivates other proteins

Upregulation – increase in number

Uveitis - infection of the middle layer of the eye involving the iris, ciliary body and/or choroid.

V

Vascular – referring to blood vessels

Vasodilator – expands the blood vessels

Vasoconstrictor – contracts the blood vessels

Vasopressin – constricts blood vessels and is an anti-diuretic

Ventral tegmental area – works with the nucleus accumbens in reward and addiction

Vesicants = compounds that cause blistering

Visceral - pertaining to internal organs, guts

W

X

Xenograft - transplantating living cells, tissues or organs from one species into another

Xerostomia - dry mouth resulting from reduced or absent saliva flow.

Y

Z

zeitgeber: something (such as the occurrence of light or dark) that sets, or re-sets, circadian rhythm
